NEXUS

Privacy Policy

Last updated: 27 October 2026 · Operated by: NEXUS · nexus.smarthome.app@gmail.com

NEXUS manages your smart home primarily on your own local network. This policy explains clearly what data we process, why and where when you create an account.

In short

- An account is required to use NEXUS. Device commands still run on your local network; they are not sent through a vendor cloud.
- Your settings, device list and chat history are stored in the cloud so they match on every device.
- We do not sell your data, use it for advertising or profile you.
- Microphone access is optional and used only when you tap the mic in NEXUS AI chat; the recording is transcribed and not stored. The camera opens only to scan QR codes and the image never leaves your device.

Data controller

The data controller is NEXUS. Contact: nexus.smarthome.app@gmail.com

What data we process

- Account: your email address and (if provided) your name. With Google sign-in, the email and profile name Google provides. Your password is stored only as a one-way hash in Supabase Auth; we cannot see it.
- Synced app data (only when signed in): profile name and photo, theme/language/unit settings, household members, scenes and automations, favourite cards, NEXUS AI chat history and usage counter, event log, home location/weather preference and the list of devices you added (name, room, protocol, local network address, last state).
- Subscription (if you bought NEXUS+): email, plan, status, period end and Whop membership ID. Your card details are processed only by Whop and never reach us.
- Support messages: your email and message when you write to us.
- Technical logs: sign-in and error logs (including IP address) kept briefly by our hosting and authentication providers.

Purposes and legal bases

To manage your account, sync your data across devices, provide your subscription and give support (performance of a contract); to keep the service secure and prevent abuse (legitimate interest); and for transfers abroad, your explicit consent (see below).

NEXUS AI

NEXUS AI has two parts. (1) Device commands (turn on a light, run a scene, ask for status) are processed locally on your device and are not sent to the cloud. (2) Messages that are not device commands, such as general chat and questions, are sent to Cloudflare Workers AI to be answered; the names, types and rooms of your devices are included as context. Your account details, email and location are not sent. We do not use this content to train AI models; Cloudflare processes it to provide the service. If you prefer, you can use only device commands in the chat. If you are signed in, your chat history syncs with your account like your other settings.

Voice input: when you tap the mic button in NEXUS AI chat, your speech is turned into text. In a browser (Chrome/Edge) the browser's own speech recognition service is used first; if it is unreachable, or in the desktop and mobile apps, the short recording is sent only to Cloudflare Workers AI (Whisper) for transcription, is not stored and is not saved to your account. The transcript is only placed in the chat input and is not sent anywhere until you press send.

Service providers and transfers

These providers' servers may be outside Türkiye. By creating an account and/or paying you give explicit consent to your data being transferred to them and abroad; you can withdraw consent by having your account deleted.

- Supabase: authentication, database and system emails.
- Cloudflare: hosting of the website; Cloudflare Workers AI for NEXUS AI chat answers and speech-to-text.
- Whop: subscription payments and invoicing.
- Google: Google sign-in and (via Gmail) verification / password-reset emails.
- GitHub: distribution of installers.
- Open-Meteo: city / approximate coordinates for weather.
- OpenStreetMap / Nominatim: maps and place search; Unsplash: some fallback images.

Cookies and tracking

Our website uses no cookies and contains no analytics or advertising trackers. The app keeps your settings in your device's local storage (localStorage).

Retention and deletion

We keep your data while your account is open. To delete your account and data, write to nexus.smarthome.app@gmail.com; we will complete the request within 30 days (except subscription records we must keep by law). In the app, open Settings and then Account security, and use Delete my account. If the server cannot finish it, the screen says so.

Your rights

Under Turkish Law No. 6698 (KVKK) art. 11 and, where applicable, the GDPR, you may ask whether your data is processed, access it, correct it, have it deleted, object to processing and request portability. Write to nexus.smarthome.app@gmail.com. You may also complain to the Turkish Personal Data Protection Authority.

Security

Connections are encrypted with TLS. The database enforces row-level access control: each user can read and write only their own data. No system is perfectly secure; we recommend a strong password and keeping your devices up to date.

Third-party devices

Smart devices you connect (e.g. Shelly, WLED, ESPHome) may talk to their manufacturers' servers under their own privacy policies. NEXUS does not share your data with those manufacturers.

Children

NEXUS is not directed to children under 13 and we do not knowingly collect their data.

Changes

We may update this policy; we will announce significant changes in the app or on the website.
